Dear Dr. [Last]:

Please consider me for the summer research internship in your laboratory's heat-transfer group. I am a third-year mechanical engineering student at [University], and I would like to spend next summer measuring how free-stream turbulence affects the cooling of gas turbines.

My coursework and laboratory work match the needs that your posting lists. In Heat Transfer and in Fluid Mechanics, I earned the top mark of my class. In our junior laboratory, I built a hot-wire rig that measured turbulence intensity to within 3 % of a reference probe. I also wrote its data-acquisition code and documented it for the next class. The enclosed résumé lists these projects and the tools I used.

Your group's recent work on leading-edge cooling is why I am writing to you. Last spring, I read your paper on turbulence grids, and its method shaped the design of my rig. Working beside its authors would teach me how such experiments are planned at full scale. In return, I can offer careful measurements and clear records of them.

Thank you for considering my application. I am available for an interview at any time and can be reached at [phone number] or [email address].

Sincerely,

[Your name]
