

sci-propos-presentation

A complete tour of the theme

[Presenter name]

[Department] · [University]

30 October 2026

Outline

[Logo] logo.svg

1. **Slide types**
   the building blocks of a deck
2. **Layout**
   two columns, side cards, tables, figures
3. **Code**
   code beside its output
4. **Procedures**
   one step per slide, full-window screenshots
5. **Animations**
   Touying’s reveals work unchanged
6. **Options**
   switches of the theme and of single slides

[Logo] logo.svg

   the building blocks of a deck
2. **Layout**
   two columns, side cards, tables, figures
3. **Code**
   code beside its output
4. **Procedures**
   one step per slide, full-window screenshots
5. **Animations**
   Touying’s reveals work unchanged
6. **Options**
   switches of the theme and of single slides

Text formatting

The lead line states the point of the slide in one sentence.

- **Bold** and *emphasis* use the primary color
- Links too; `inline  code` matches the text
- Package names stand out: `touying`, `fletcher`
- Footnotes work as usual[1]

Credit line: sources, versions, “illustrative data”.

[1] Like this one.

Lists

[Logo] `logo.svg`

Bullets, numbers and terms share one rhythm.

- A bullet list
  - with a second level
- and a third item

1. First step
2. Second step

Flux path length per volume and time

Fluence flux integrated over time

Dose energy absorbed per mass

Content stays balanced

`#lead` goes to the top, `#credit` to the bottom, content in between.

Whatever the order in the source, the content block is centered in the space between the lead line and the credit line.

Use `#slide(align: top)[...]` to pin content to the top instead.

[Logo] logo.svg

1. **Slide types**
   the building blocks of a deck
2. **Layout**
   two columns, side cards, tables, figures
3. **Code**
   code beside its output
4. **Procedures**
   one step per slide, full-window screenshots
5. **Animations**
   Touying’s reveals work unchanged
6. **Options**
   switches of the theme and of single slides

Two columns

At most two columns; both start at the same top.

Left column

Text, code or a picture. `two-columns(ratio: (1.2fr, 1fr))` sets the widths.

Right column

Captions sit right under their picture, never floating away.

Side cards

[Logo] `logo.svg`

A deck of cards beside the content holds side material.

- The main points of the slide go here
- Definitions, reminders and recaps go in the cards
- Cards have a frame on one side only

DEFINITION
Fluence
Flux integrated over time.

REMINDER
Units: cm^{-2}.

RECAP
Flux ⟶ fluence ⟶ dose.

Card kinds

Five kinds: solid, dashed or dotted frame, on any side.

NOTE
A side note in a solid frame.

DEFINITION
Neutron flux
Path length per volume and time.

IN SHORT
Typst
A markup language with scripting.

RECAP
Dashed frame: what we just saw.

REMINDER
Dotted frame: don’t forget this.

CUSTOM
Any label, frame, color and side.

Tables and math

[Logo] logo.svg

Tables get the three-line style without asking.

Nuclide	Half-life	Unit
Xe-133	5.25	d
I-131	8.02	d
Ba-140	12.75	d

Decay of a single nuclide:

$$N(t) = N_0 \cdot 2^{-t/T_{1/2}}$$

with half-life $T_{1/2}$.

Illustrative values.

Figures and quotes

Figure 1: A captioned figure

> All models are wrong, but some are useful.
> — G. E. P. Box

A pipeline

[Logo] `logo.svg`

One row of boxes is the usual exception to two columns.

[Logo] logo.svg

1. **Slide types**
   the building blocks of a deck
2. **Layout**
   two columns, side cards, tables, figures
3. **Code**
   code beside its output
4. **Procedures**
   one step per slide, full-window screenshots
5. **Animations**
   Touying’s reveals work unchanged
6. **Options**
   switches of the theme and of single slides

Code beside its output

[Logo] `logo.svg`

`demo` evaluates the very string it displays.

```
#let half = 8.02
$ N(t) = N_0 dot 2^(-t \/ #half) $
```

$$N(t) = N_0 \cdot 2^{-t/8.02}$$

The output on the right is produced from the code on the left.

Labelled panels

[Logo] `logo.svg`

Labels sit 6 pt above their panel.

Shell

```
typst compile deck.typ
typst watch deck.typ
```

Python

```
import typst
typst.compile("deck.typ")
```

1. **Slide types**
   the building blocks of a deck
2. **Layout**
   two columns, side cards, tables, figures
3. **Code**
   code beside its output
4. **Procedures**
   one step per slide, full-window screenshots
5. **Animations**
   Touying’s reveals work unchanged
6. **Options**
   switches of the theme and of single slides

Windows · 1/2 · Open the settings

[Logo] logo.svg

Open **File › Options**, then click **Trust Center**.

[Screenshot]
shots/win-1.png

Windows · 2/2 · Add the catalog

[Logo] `logo.svg`

Paste the share path into **Catalog Url** and click **Add catalog**.

`shots/win-2.png`

[Logo] logo.svg

1. **Slide types**
   the building blocks of a deck
2. **Layout**
   two columns, side cards, tables, figures
3. **Code**
   code beside its output
4. **Procedures**
   one step per slide, full-window screenshots
5. **Animations**
   Touying’s reveals work unchanged
6. **Options**
   switches of the theme and of single slides

Incremental reveals

#pause shows one point per click.

- Visible from the start

Incremental reveals

#pause shows one point per click.

- Visible from the start
- Appears on the second click

Incremental reveals

#pause shows one point per click.

- Visible from the start
- Appears on the second click
- Appears on the third click

The slide number stays the same across clicks.

1. **Slide types**
   the building blocks of a deck
2. **Layout**
   two columns, side cards, tables, figures
3. **Code**
   code beside its output
4. **Procedures**
   one step per slide, full-window screenshots
5. **Animations**
   Touying’s reveals work unchanged
6. **Options**
   switches of the theme and of single slides

Theme options

[Logo] `logo.svg`

```
#show: presentation-theme.with(
  lang: "en",               // "fr", "zh-Hans", "zh-Hant"
  style: "sans",            // or "serif"
  slide-level: 2,           // 3 adds subsections
  outline-style: "parts",   // or "thesis"
  numbering: (section: true, subsection: true, title: false),
  section-label: "top",
  title-rule: true,
  files: p => path(p),
)
```

Per-slide options

This slide is pinned to the top and hides its section label:

```
#slide(title: [...], align: top, section-label: none)[...]
```

One sentence on the primary color.
